Part III EXAMINER'S AMENDMENT

Part III DETAILED ACTION

1. An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 C.F.R. § 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the Issue Fee.

Authorization for this Examiner's Amendment was given in a telephone interview with Attorney Robert J. Black on February 16, 1995.

2. The application has been amended as follows:
On Page 1, line 6 of the specification; after the date "June 25, 1993" has been inserted the following text for completeness of continuing data section:

--- and now U.S. Patent Number 5,357,782

issued October 25, 1994 ---

On Page 8, claim 1, line 9; before the word "refrigeration" has been inserted the following phrase:

--- refrigerant for use in ---

On Page 8, claim 1, line 13; after the word "lamp" has been inserted the following text:

--- that produces light ---

On Page 8, claim 1, line 17; after the word "detectable" has been inserted the following phrase:

--- by visual observation ---

Art Unit: 2605

On Page 8, claim 1, line 19; the word "dye" has been replaced with the following text:

--- dye, refrigerant ---

On Page 8, claim 1, line 19; after the word "mixture" has been inserted the following phrase:

--- seeping thru and ---

On Page 8, claim 1, line 20; the words "at said leak site, " have been altered into the following:

--- at location of said leak site, then ---

On Page 8, claim 1, line 21; the word "oxidation" has been replaced with the following phrase:

--- undergoing chemical oxidation changes ---

On Page 8, claim 1, line 21; the words "provide an" has been replaced with the following text:

--- provide capability for stable fluorescent ---

On Page 12, claim 15, line 3, after the word "solubilized" has been inserted the following phrase:

--- in the mixture preparation step ---

3. The following is an Examiner's Statement of Reasons for Allowance: The prior art fails to disclose a method of detecting leaks in a refrigeration system which uses a prepared mixture of fluorescent dye selected from the general class of naphthalimide dye structures mixed with refrigeration system refrigerant and lubricant in an operating refrigeration system for a pre-determined period of time, before examining the system by means

of a lamp with light wavelength output from 300 and 480 nanometers so as to determine the presence of a leak site by the occurrence of colored fluorescence detectable by visual observation of possible leak sites under such lamp light when the dye, refrigerant and lubricant mixture seeps thru, appears and then remains at such leak site without undergoing chemical oxidation changes. Also, further novelty is found for the above method of detecting leaks that includes the step of solubilizing a dye mixture during its preparation by the addition of a solvent compatible with the refrigeration system lubricant and dye.

Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably **accompany** the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
